## **Drawings**

The drawings are objected to under 37 CFR 1.83(a) because they fail to show 'the flow rate becomes quite large at the center portion of the tube and the flow rate becomes quite small at the portion near the wall of the tube" as described in the amended specification. The existing Fig. 1C and 1D depict quite reverse of the stated amended specification. Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abevance.

The proposed drawing correction for Fig. 2 was received on 02/18/04. The drawing is approved.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-2, 4-6 and 8-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yamazaki, Masao. Yamazaki, Masao discloses a coaxial flow of

liquids comprising a supply of a sample liquid through tube 23 having a tip end (nozzle end) of tube 23) of which is disposed at a center portion of flow of sheath liquid supplied through the sheath tube 24. Yamazaki, Masao discloses the invention substantially as claimed as stated above. However, Yamazaki, Masao does not disclose a valve connected to tube 23 to control the sully of fluid therethrough. The Examiner considers obviously there should be some sort of controlling arrangement of flowing fluids/liquid on both the tube 23 and 24. See Fig.3.

Claims 3 and 7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

## Response to Arguments

Applicant's arguments, see last Para of page 9 to page 12, filed 02/18/04, with respect to the rejection(s)of claim(s) 1-4 under 102 and 103 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of new prior art of record as narrated above in the claims rejections.

Any inquiry concerning this communication or earlier from the examiner should be directed to Mohammad M. Ali, whose telephone number is (703) 308-5032. The examiner can be reached from 6:10am to 4:30pm from Monday to Friday.
